Example presentation

how my build works with pandoc

Vasil Kolev <vasil@ludost.net>

Sub-chapter one

- An example for a heading in the presentation

Something 1/10

- Hello
  - world
- Simple bullet points

Something other

- Again bullet points

Sub-chapter two

- Here we didn't insert the full-page header
- We just started with the text
- Sometimes this works better

Source code

```c
#include <stdio.h>

int main(int argc, char **argv) {
    printf("hello world");
    return 0;
}
```

- This is how we put code in (preformated)

Chapter two

- No sub-chapters
- One image

Image processing

- The image will be padded on both sides to be displayed properly
- The Makefile will generate the dependencies for this pandoc automatically
- Example:

example.pdf: happycat.png

That's all

- Any questions should go to the author.
